muscle structure development
embryonic morphogenesis
regulation of small GTPase mediated signal transduction
regulation of cellular response to heat
covalent chromatin modification
negative regulation of phosphorus metabolic process
anterior/posterior pattern specification
'de novo' protein folding
gene silencing
regulation of cell morphogenesis
positive regulation of cellular catabolic process
gamete generation
actomyosin structure organization
positive regulation of neuron death
epithelial cell differentiation
regulation of ossification
regulation of chromatin organization
striated muscle cell proliferation
multicellular organismal homeostasis
homeostasis of number of cells
cellular response to organic cyclic compound
positive regulation of cell motility
chromatin organization involved in negative regulation of...
methylation
cell aging
cellular amino acid metabolic process
antigen processing and presentation of exogenous antigen
oxidative phosphorylation
ribosome biogenesis
neutrophil mediated immunity
inner mitochondrial membrane organization
mitochondrial translation
mitochondrial respiratory chain complex assembly
small molecule catabolic process
hydrogen peroxide catabolic process
SRP−dependent cotranslational protein targeting to membrane
peroxisome organization
antimicrobial humoral response
process utilizing autophagic mechanism
autophagy
tumor necrosis factor production
response to oxidative stress
DNA−dependent DNA replication
vitamin metabolic process
steroid biosynthetic process
viral gene expression
ribonucleoprotein complex subunit organization
organelle disassembly
chemical synaptic transmission, postsynaptic
behavior
regulation of membrane potential
modulation of chemical synaptic transmission
cell growth
response to mechanical stimulus
regulation of T cell activation
regulation of cell division
cellular response to environmental stimulus
macromolecule deacylation
wound healing
tissue remodeling
cell−cell adhesion via plasma−membrane adhesion molecules
developmental growth
negative regulation of nucleotide metabolic process
cellular response to drug
regulation of fibroblast proliferation
regulation of cell size
membrane fusion
cellular response to oxygen levels
positive regulation of defense response
protein localization to synapse
neurotransmitter transport
multicellular organismal signaling
neuron migration
hormone transport
regulation of immune effector process
