negative regulation of nucleotide metabolic process
cellular response to drug
regulation of cellular response to heat
'de novo' protein folding
positive regulation of neuron death
regulation of fibroblast proliferation
cell aging
regulation of chromatin organization
chromatin organization involved in negative regulation of...
tissue remodeling
developmental growth
hydrogen peroxide catabolic process
antimicrobial humoral response
vitamin metabolic process
peroxisome organization
organelle disassembly
tumor necrosis factor production
membrane fusion
ribonucleoprotein complex subunit organization
steroid biosynthetic process
DNA−dependent DNA replication
positive regulation of defense response
antigen processing and presentation of exogenous antigen
cellular response to oxygen levels
response to mechanical stimulus
cellular response to environmental stimulus
regulation of cell division
macromolecule deacylation
striated muscle cell proliferation
regulation of ossification
homeostasis of number of cells
anterior/posterior pattern specification
positive regulation of cellular catabolic process
gene silencing
regulation of T cell activation
regulation of immune effector process
neurotransmitter transport
hormone transport
protein localization to synapse
neuron migration
multicellular organismal signaling
chemical synaptic transmission, postsynaptic
cell−cell adhesion via plasma−membrane adhesion molecules
regulation of cell morphogenesis
actomyosin structure organization
wound healing
regulation of cell size
cell growth
regulation of small GTPase mediated signal transduction
negative regulation of phosphorus metabolic process
embryonic morphogenesis
gamete generation
epithelial cell differentiation
cellular response to organic cyclic compound
positive regulation of cell motility
multicellular organismal homeostasis
muscle structure development
covalent chromatin modification
regulation of membrane potential
modulation of chemical synaptic transmission
behavior
methylation
oxidative phosphorylation
mitochondrial respiratory chain complex assembly
mitochondrial translation
cellular amino acid metabolic process
ribosome biogenesis
inner mitochondrial membrane organization
small molecule catabolic process
neutrophil mediated immunity
process utilizing autophagic mechanism
autophagy
response to oxidative stress
viral gene expression
SRP−dependent cotranslational protein targeting to membrane
